Abstract

Introduction

This is the user manual of CNApy. CNApy is a graphical interface for the modelling and analysis of metabolic networks on the basis of constraint-based (stoichiometric) modeling approaches. It allows

- the import/export of SBML models
- creating COBRApy/CNA models
- linking a graphical representation to the model data
- convenient exploration and editing of the model
- model analysis with standard and advanced constraint-based methods
- and saving everything as a CNApy *.cna project

The methods provided for model analysis (some of them are part of CNApy but most are functions from CNA and COBRApy) include:

- Flux balance analysis
- · Parsimonious flux balance analysis
- Flux variability analysis
- · Minimal cut sets
- · Elementary modes
- Phase plane analysis
- Yield optimization

CNApy is available at https://github.com/cnapy-org/CNApy under the Apache-2.0 License.

We appreciate any comments or suggestions for improvements and we are greatly interested in your feedback which you can give at our <u>User Forum</u>.

For feature requests and bug reports please use our <u>Issue tracker</u>

Thank you for using CNApy!

Putting each sentence on its own line has numerous benefits with regard to <u>editing</u> and <u>version</u> <u>control</u>.

Line break without starting a new paragraph by putting two spaces at end of line.

Document organization

Document section headings:

Heading 1

Heading 2

Heading 3

Heading 4

Heading 5

Heading 6

Horizontal rule:

Heading 1's are recommended to be reserved for the title of the manuscript.

Heading 2's are recommended for broad sections such as Abstract, Methods, Conclusion, etc.

Heading 3's and Heading 4's are recommended for sub-sections.

Multiple citations can be put inside the same set of brackets [1,5,7]. Manubot plugins provide easier, more convenient visualization of and navigation between citations [2,3,7,8].

Citation tags (i.e. aliases) can be defined in their own paragraphs using Markdown's reference link syntax:
